A Saint-Gobain brand

A GREATER COMMITMENT TO HEALTH AND SAFETY

As your end-to-end partner, Sekurit Service is also here to help you improve and maintain the health and safety at work for all workers. With our new range of safety gloves, Sekurit Service supports the development and maintenance of the highest standards of hand protection.

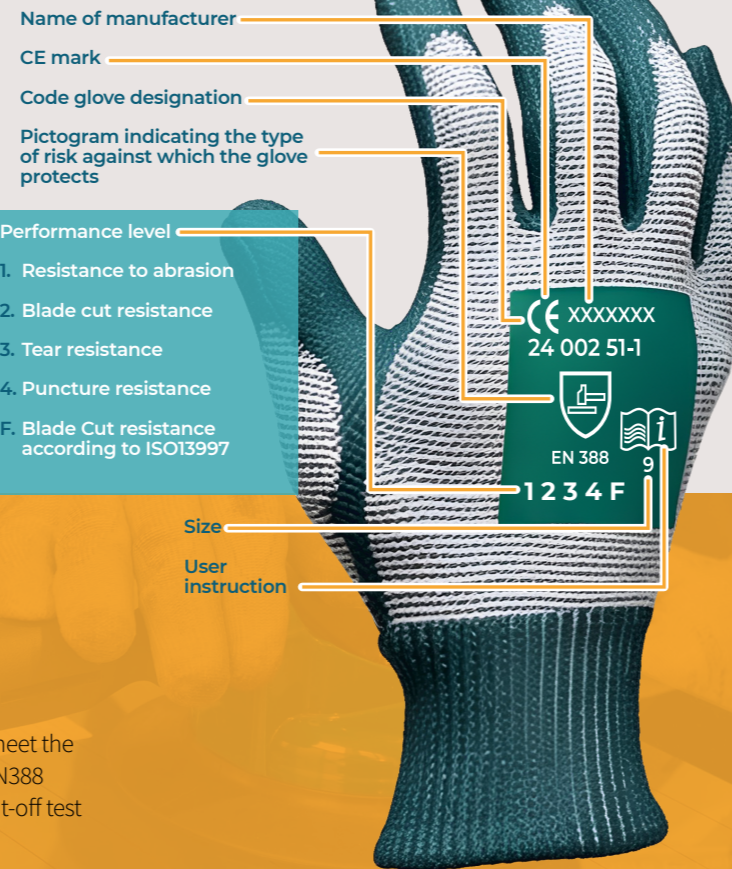

As a leading company and a Saint-Gobain brand, we are committed to promoting health and safety in the workplace, helping you to reduce hazards to a minimum where possible.

Which gloves for which job? UNDERSTANDING PPE STANDARDS

Knowledge of the EN standards and certifications are essential as it tells you which glove works best for which application. The standards are designed to assist managers in the provision and maintenance of workplace safety levels.

Regarding Sekurit Service activity and customers' business, it is mandatory to get at least certification EN388. This standard applies to all kinds of protective gloves in respect of physical and mechanical aggressions caused by abrasion, blade cut, puncture, and tearing.

Gloves branding

HOW HAVE EN388 REQUIREMENTS EVOLVED?

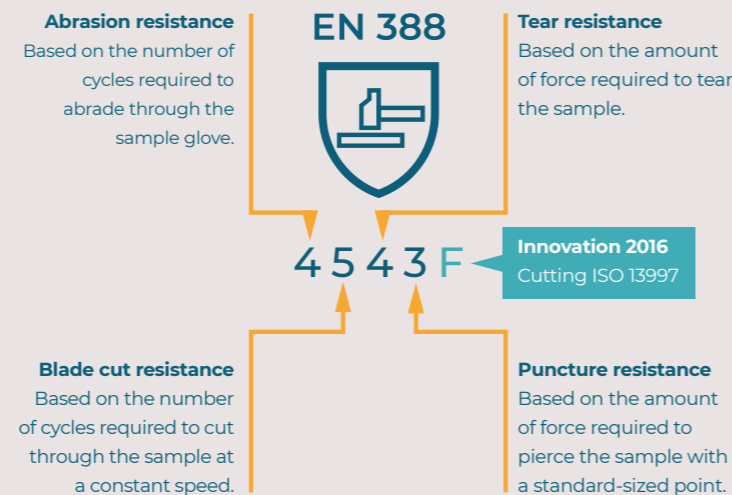

In November 2016, International regulations on PPE were adapted to meet the challenges of improving protection against mechanical hazards. The EN388 mechanical hazards standard was updated to include the ISO 13997 cut-off test and the impact resistance test.

UNDERSTANDING THE NUMERIC CODES AND SYMBOLS

When buying industrial gloves, an understanding of the numeric codes and symbols used for specifying protection levels in the standards is recommended.

Each requirement is represented by a symbol and a number stamped on the glove: the higher the number, the higher level of protection.

The 'mechanical risks' pictogram is accompanied by a four-digit code. You can also find standard levels in letter form, for ISO13997: A, B, C, D, E, F which define the glove's cut resistance in Newtons.

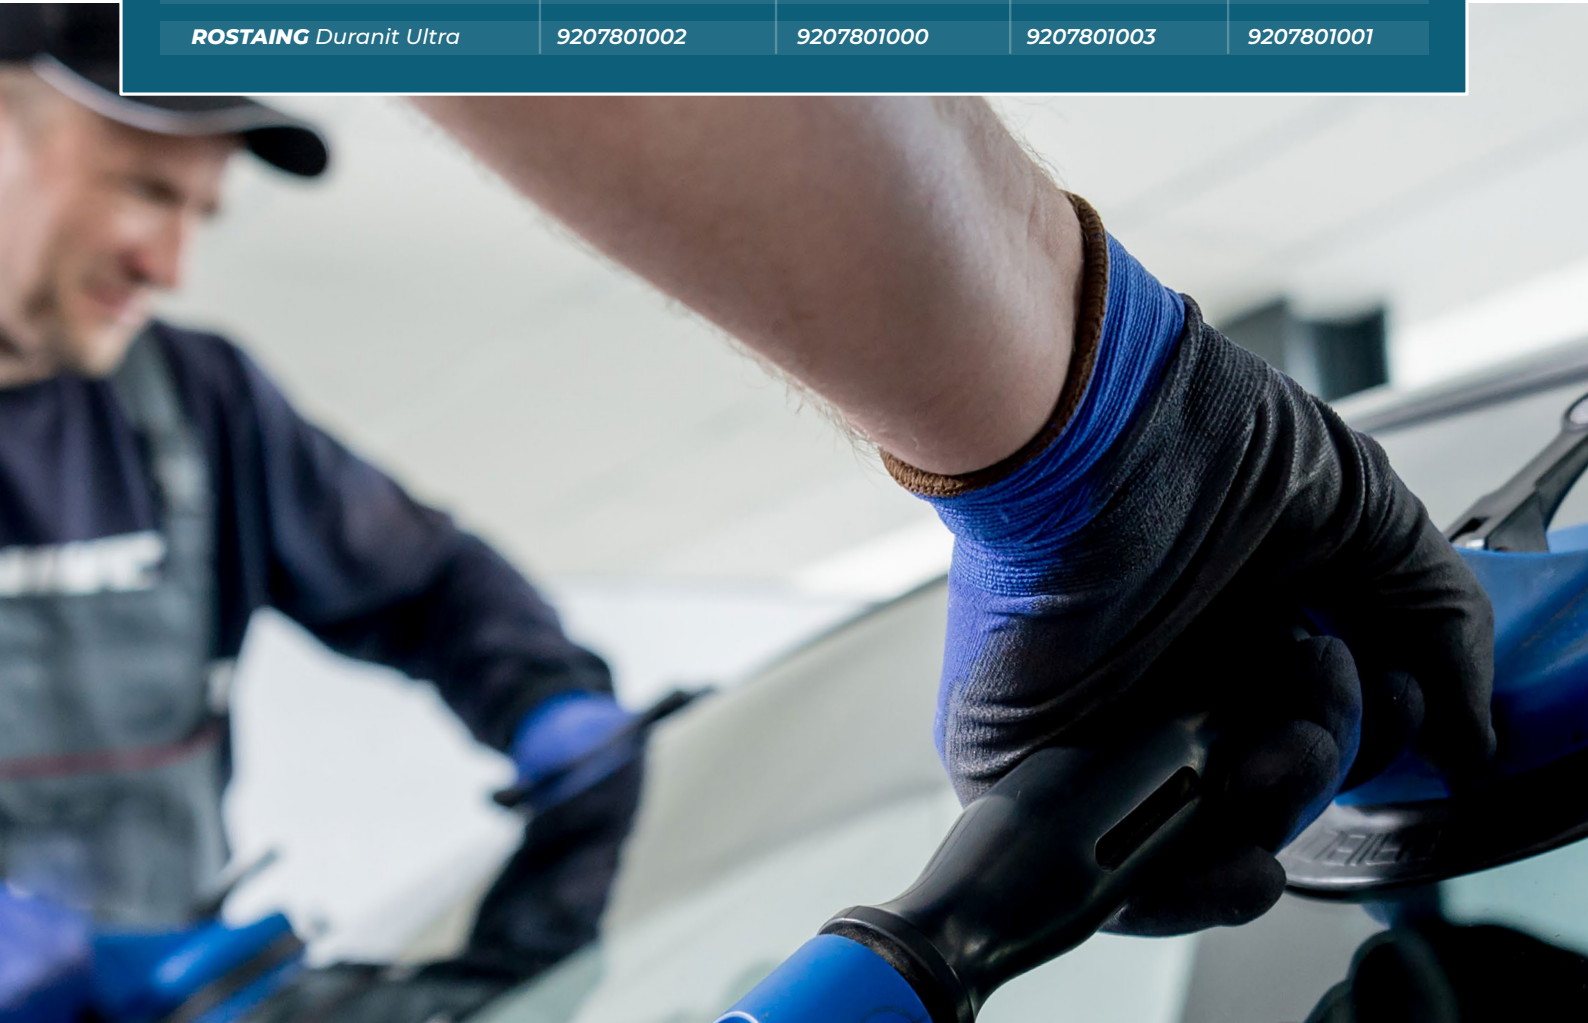

CHOOSING THE RIGHT SAFETY GLOVES FOR YOUR ACTIVITY

	ANSELL HyFlex® 11-842	GSA Dexlite Edge	ANSELL HyFlex® 11-561	ROSTAING Duranit Ultra
